

## **Urine Sample Testing**

Dear Patient's

If you are requested or need to bring in a urine sample to reception for testing, the sample should only be in a sterile white topped specimen pot only. You can obtain one of these from reception at the surgery along with a form to complete with your symptoms and your contact Information.

The Laboratory will be unable to process any sample that is not in the correct specified container and it needs to be clearly labelled

The doctors will review all test results. You will be contacted if any follow up is required. Please ensure you have given the correct details.

Thank you The Glebe Surgery
