

Clinical Pharmacists

Clinical Pharmacists are experts in medicines and can help people stay as well as possible. They support those with long-term conditions like asthma, diabetes and high blood pressure or anyone taking multiple medicines to make sure their medication is working. They work with GPs, local pharmacies and hospitals to ensure that medicine services are joined up. Many Clinical Pharmacists can also prescribe medicines.

They can help with:

- » In-depth reviews of your medicines if you have a long-term condition
- » Agreeing and making changes to your prescription
- » Advice about medicines and side effects
